

One Platform. Every Tap Counted.

A single, integrated RFID and barcode platform that runs your workforce, your access points, your assets, and your clinic — from one vendor, one card, one login.

What's in the package

- RFID cards and RFID reader hardware, pre-configured and ready to deploy
- QR code and barcode scanner hardware for assets, inventory, and clinic workflows
- Electromagnetic RFID-based access control door hardware and controller
- HR & Operations Management System (HR & OMS) — the workforce platform
- RFID and barcode based Assets & Inventory Management System
- RFID and barcode based Clinic Management System — for human and pet clinics
- Ongoing support, onboarding, and training included

HR & Operations Management System

The center of the platform. Every employee gets one RFID card that handles attendance, identity, and access — while HR gets a single portal for everything else.

Attendance	Tap-in / tap-out attendance capture, automatic late and undertime detection, and a live dashboard that updates the moment a card is tapped.
Leave management	Employees file leave requests from their own account; managers and HR approve or decline with a comment, and balances update automatically.
Payroll support	Payslips, bonuses, and pay adjustments are available to every employee from their own profile — no more chasing HR for a copy.
Employee records	Digital employee profiles, employee ID cards, certificates, and a searchable company directory.
Role-based access	Separate, purpose-built views for Employees, Managers, and HR staff — everyone sees exactly what they need and nothing they don't.
Resilient by design	Attendance capture keeps working through brief network interruptions and automatically syncs once connectivity is restored — no lost taps.

RFID-Based Access Control Doors

The same employee card that clocks a shift in also unlocks the door. Electromagnetic RFID locks integrate directly with the platform so every entry is logged, every access rule is enforced automatically, and lost cards can be deactivated in seconds.

- Electromagnetic lock hardware with fail-safe / fail-secure configuration
- Per-door, per-schedule, and per-role access rules
- Full entry/exit audit trail tied to the same employee identity used for attendance
- Remote lock/unlock and instant card revocation from the HR & OMS portal

Assets & Inventory Management System

Tag it once, track it forever. RFID and barcode labels turn every asset — equipment, tools, stock, supplies — into something the system can see, count, and account for automatically.

- RFID and barcode tagging for assets, equipment, and inventory stock
- Assignment and checkout history — who has what, and since when
- Maintenance scheduling and document attachments per asset
- Low-stock and reorder alerts for inventory items

Clinic Management System — Human & Pet

The same RFID and barcode foundation, purpose-built for clinics — whether the patient walks in on two legs or four.

- RFID/barcode patient and pet ID tracking from check-in to checkout
- Appointment scheduling, records, and visit history in one place
- Billing and inventory tied directly to services rendered and supplies used
- Separate, tailored workflows for human clinics and veterinary/pet clinics

Why one vendor, one package

Most IT providers sell you a workforce system from one company, an access-control installer from another, and an inventory app from a third — leaving you to make them talk to each other. We designed all four pieces together, on one identity (the RFID card), from day one. That's a package no other single IT provider offers.
